GreenWorks Professionals Certified by National Association of Home Builders
Distinction Highlights Jersey Shore Firm's Commitment to Affordable Green Building

(Allenwood, NJ) August 31, 2009 – Three environmental professionals from GreenWorks Environmental, LLC, have been distinguished as Certified Green Professionals (CGPs) from the National Association of Home Builders (NAHB).

This designation recognizes builders, remodelers and other industry professionals that incorporate eco-friendly building principles into homes without driving up construction costs. Victor Coppola of Allenwood, NJ, Nicky Coppola, of Point Pleasant, NJ, and Nick Coppola of Wall, NJ—all environmental planners at the firm—have earned this designation.

“It just made sense that GreenWorks would be affiliated with this organization and its certification program—the CGP program recognizes everything that our firm stands for,” said Victor Coppola, an Environmental Planner with GreenWorks. “All land, environmental and building-related projects have the potential to incorporate green elements, which help maximize the client’s goals while respecting the natural surroundings. That has been the basis of our entire company since its inception, and it’s nice to be recognized for the services we provide.”

To qualify for the certification, the professionals had to have a minimum of two years of building industry experience and complete 24 hours of NAHB-approved training, which covered a broad array of energy and resource efficiency techniques on saving clients money without increasing the home costs. The training also included information on other green building practices. The environmental planners will participate in continuing education every three years as part of the program.

The American National Standards Institute (ANSI) recently approved the National Green Building Standard for residential construction developed in conjunction with the NAHB Research Center. According to NAHB, green homes incorporate environmental considerations and resource efficiency into every step of the building and development process to minimize environmental impact and promote energy efficiency.

Based in Allenwood, NJ, GreenWorks specializes in all aspects of Land Use Consulting, Environmental Planning and Green Design / Buildings on behalf of developers, municipalities and property owners.

Have questions about going green? Let the highly qualified environmental professionals at GreenWorks help. Call GreenWorks today at 732.223.2073 to set up a free, no-obligation consultation, or visit GreenWorks on the Web at www.greenworksllc.com.
